I'm a young developer passionate about modern, minimalistic, and functional designs, using Javascript as my main language, and mostly React as my main tool.

Working with the latest technologies, I try to stay on the frontline of the future of the internet and everything around it. Design that strives forward should be followed by functionality.

When I'm not writing code, I like to collect and listen to music. I'm also very interested in audiovisualisation and creative coding, or reading books and articles about stuff that matters to me.
